

Refuelling

Our commitment to be a one stop alternative fuels shop extends to providing refuelling infrastructure and backup for all gaseous fuels. Whether you need equipment for compressed natural gas (CNG), liquefied natural gas (LNG) or liquid petroleum gas (LPG), Advanced Fuels can provide any or all of the products or services required.

As a part owner of the GasComp business and authorised agent for FuelMaker in South East Asia, clients are assured that Advanced Fuels can supply the right refuelling infrastructure for any situation.

Starting with helping you select the right fuel for your application, we can organise fuel supply, compression and cryogenic equipment, storage and dispensing equipment, and training for your personnel. After more than 25 years in the alternative fuels industry we've developed in-house expertise and connections with relevant experts so you can concentrate on managing your fleet.

We can even assist with arranging finance or leasing packages.

If you have easy access to public refuelling sites you may not need any refuelling equipment. If not, your needs will depend on a number of variable such as fleet size, fuel demand, access to gas lines or tanker access, power availability, incoming gas pressure (if available), etc. Advanced Fuels can assist you to ensure that you are supplied with the right package for your needs.
