

Training

Advanced Fuels is a leader in gaseous fuels training in Australia and the Asia-Pacific region. Our programs have been delivered in Australia, Indonesia, Bangladesh, India, Thailand and Singapore.

Advanced Fuels is a Registered Training Organisation with Automotive Training Australia (ATA) and the Victorian Automotive Chamber of Commerce (VACC), and conducts CNG, LNG, LPG and specialist courses for students that are already qualified motor mechanics.

Our principal training facilities are located at our Head Office in Melbourne, Australia, though all of our standard training programs can be presented at locations to suit our clients. Students are taught theory and practical components, with the practical modules including hands on training in our Research and Development Workshop in the same building.

All of our course take local statutory requirements into consideration and wherever possible we liase with local qualification agencies to ensure compliance. In Australia, all courses that lead to a qualification have been approved by Automotive Training Australia.

Our primary gaseous fuels courses include:

- CNG Installation, Service, Repair and Maintenance
- LPG Installation, Service, Repair and Maintenance.

In addition to these we are also able to offer training related to:

- Air conditioning
- ABS brakes
- Air bags
- Multi-Meter use
- Oscilloscope use
- Basic E.F.I.

For more details about Advanced Fuels training, please contact our Technical and Training Manager, Paul Harrison on +61 (0)3 9330 3185, paulh@advancedfuels.com.au.
