

## Engine R&D

In keeping with our name, Advanced Fuels is constantly seeking ways to improve current designs and develop next generation technology. Examples of these projects include:

- Complete conversion of Isuzu Euro 2 diesel engines to operate as dedicated natural gas with significant emissions reductions.
- Recalibration of existing dual-fuel diesel/CNG engines to more than triple CNG/diesel usage ratios
- Hydrogen internal combustion engine (ICE) conversion development.

If you require a specialist application for gaseous fuels or would like technology developed from the concept stage, talk to Advanced Fuels today.
